ACKNOWLEDGEMENTS

This compilation was undertaken as part of a program on molten electrolytes in the Laboratory of the senior author at Rensselaer Polytechnic Institute, and has been made possible in large part by financial support received from the U.S. Air Force, Office of Scientific Research, Washington, D.C.

The authors wish to thank F.J. Kelly for helpful discussions and direct participation in the early stages of the work in single salt melts; the assistance of Jeanne Perano, George Mayer, and Kenneth Klotzkin in the various phases of the preparation of this compilation is acknowledged.

ABSTRACT

Conductance, density, and viscosity data at round values of temperature ( $^{\circ}$ K) are given for some 126 inorganic compounds as Single-Salt Melts (Fluorides, 15; Chlorides, 34; Bromides, 20; Iodides, 23; Oxides, 7; Sulphates, 5; Nitrates, 7; Carbonates, 3; and Miscellaneous, 12). Equations expressing the temperature dependence of these properties for the single-salt melts are also given. For mixtures of these salts, the binary systems that have received attention are listed; numerical values for these mixtures are not given but are referenced.

## I. INTRODUCTION

This compilation was undertaken largely to meet the need in the scientific community at large for "best" values for inorganic salts as single-salt melts. The need for such values to advance both theoretical and experimental studies in the various areas of high temperature technology involving molten inorganic compounds has become apparent with the increasing interest and activity in the last decades.

An assessment of the original publications for the properties of electrical conductance, density, and viscosity, for the various inorganic compounds in the molten state, for the period 1850 - 1964, was the first part of this study. Chemical Abstracts (ACS), Current Chemical Papers (Chemical Society, London), and Molten Salt Bibliography (Bibliography on Molten Salts; G.J. Janz, Rensselaer Polytechnic Institute, 1961); an Annotated Bibliography of Molten Salts (L.S. Charnoff, New York University, 1958), as well as the various scientific journals were searched for contributions pertinent to this work. The original data for some 126 inorganic compounds as single-salt melts were thus traced to the original research publications.

Where a given salt has been studied by more than one group of investigators, graphs of the numerical values against

temperature were drawn using the original experimental values (where available), and data calculated from equations quoted in these publications. In some cases, the equations for these data, with limits of error, are quoted, and in such cases, additional weight was given to these values when drawing a smooth curve through the graphical points. Comparison of the results of the various investigators with such a reference curve made possible the immediate exclusion of grossly inaccurate data, and the grading of the remaining values in order of agreement with the reference curve. The grading order was reasonably consistent in all cases where it was applicable; it was used as a base for the "best value" decisions.

The numerical data were programmed to linear, quadratic, and exponential type equations, using an IBM 1410 computer. Conservative standard deviations were obtained and are listed in the Tables of Equations; the equation giving the smallest standard deviation ( $s$ ) was used to compute the values of density ( $\rho$ ), specific conductance ( $X$ ), equivalent conductance ( $\Lambda$ ), and viscosity ( $\eta$ ) at round temperatures (10°K intervals for the range of measurements). The "best values" for  $\rho$  and  $X$  were used to compute the values of equivalent conductance.

For the mixtures, the assessment was restricted to binary systems. Since both composition and temperature are variables, and owing to the very limited number of studies made for any one system, no numerical data are listed in the present compilation. The binary

system and the reference to the original research publication are listed as a guide to the results in this area of molten salt studies.

Properties of the very low melting salts (e.g. < 100°C,  $\text{AlBr}_3$ , quaternary ammonium salts), and the silicates have not been included in this work.

## II. SINGLE SALT MELTS

A: Numerical Values The "best values", and the equations used (linear, quadratic, and exponential) for density ( $\rho$ ), specific conductance ( $\times$ ), equivalent conductance ( $\Lambda$ ), and viscosity ( $\eta$ ), are listed at 10°(K) intervals for temperature range of the measurements (Tables 1-126). The equivalent weight, melting point temperature, the temperature dependence as an equation, and the salient literature references are also given for each compound.

For presentation of the data, a classification in groups by anions, i.e., Fluorides, Chlorides, Bromides, Iodides, Carbonates, Nitrates, Oxides, Sulphates, and Miscellaneous, has been used. The order within each anionic group is summarized in the group title sheet preceding each set of tables.

B: Equations In general practice, the temperature dependence has been expressed by (a) linear, and (b) exponential type equations. Tables 127-130 list the coefficients for the following equations:

$$\text{density: } \rho = a - bT \quad (1)$$

$$\text{electrical conductance: } \kappa = a - bT \quad (2)$$

$$\kappa = A_\kappa e^{-E_\kappa/RT} \quad (3)$$

$$\text{and } \Lambda = A_\Lambda e^{-E_\Lambda/RT} \quad (4)$$

$$\text{viscosity: } \eta = A_\eta e^{E_\eta/RT} \quad (5)$$

$$\text{and } \eta = \frac{B}{v-b} \quad (6)$$

where the last expression (eq. 6) is an alternate method of representing the viscosity variation with temperature (the Batchinskii equation).

C: References The references to the original publications used as the data sources for the "best values" for the single-salt melts computed in this work are listed in this section.

### III. MIXTURES

The binary systems for which density, conductance, and viscosity data have been reported are listed in a series of three tables in this section; the salient references to each table are given so that the results, as originally published, can be readily recovered from the literature.

### IV. UNITS

Unless otherwise noted, the units in this compilation are as follows:

|                        |   |
|------------------------|---|
| Temperature            | $T^\circ K$   |
| Equivalent Conductance | $\Lambda \text{ ohm}^{-1} \text{cm}^2 \text{equiv.}^{-1}$ |
| Specific Conductance   | $\kappa \text{ ohm}^{-1} \text{cm}^{-1}$                  |
| Density                | $\rho \text{ g cm}^{-3}$                                  |
| Viscosity              | $\eta \text{ cp}$   |

$$\eta = \frac{B}{(v-b)}$$

Units (cont'd from p. 4)

For Tables 127-130 the units of  $\rho$ ,  $\Lambda$ ,  $\kappa$  and  $\eta$  are as in Tables 1-126. The units for the parameters in the above equations are:

$$A_{\kappa} : \text{ohm}^{-1} \text{ cm}^{-1}$$

$$E_{\kappa} : \text{Kcal mole}^{-1}$$

$$A_{\Lambda} : \text{ohm}^{-1} \text{ cm}^2 \text{ equiv}^{-1}$$

$$E_{\Lambda} : \text{cal mole}^{-1}$$

$$A_{\eta} : \text{cp}$$

$$E_{\eta} : \text{cal mole}^{-1}$$

### Molten Mixtures

The Binary Systems are listed by chemical compounds. The salient references are given so that the results, as originally published, can be recovered for the literature.

Table 131  
Melt Densities-Binary Systems

| <u>System</u>  | <u>Ref.</u> | <u>System</u>  | <u>Ref.</u>       | <u>System</u>   | <u>Ref.</u> |
|--|-------------|--|-------------------|---|-------------|
| AgBr-AgCl  | 25          | BaCl <sub>2</sub> -PbCl <sub>2</sub>                             | 1,25              | Na <sub>2</sub> CO <sub>3</sub> -K <sub>2</sub> CO <sub>3</sub> | 39          |
| AgBr-KBr   | 7,25        | BaF <sub>2</sub> -Na <sub>3</sub> AlF <sub>6</sub>               | 10,15             |   |             |
| AgCl-AgNO <sub>3</sub>   | 33          | BaF <sub>2</sub> -NaF  | 15                |   |             |
| AgCl-KCl   | 7,25        | BaNO <sub>3</sub> -KNO <sub>3</sub>                              | 36                |   |             |

| Al <sub>2</sub> O <sub>3</sub> | 163, 164 |
| PbO                            | 117, 147 |
| Sb <sub>2</sub> O <sub>3</sub> | 118, 145 |
| Bi <sub>2</sub> O <sub>3</sub> | 119, 145 |
| TeO <sub>2</sub>               | 120, 150 |

Sulphates

|                          |                              |
|--------------------------|------------------------------|
| $\text{Li}_2\text{SO}_4$ | 122, 142, 152                |
| $\text{Na}_2\text{SO}_4$ | 123, 144, 150, 153           |
| $\text{K}_2\text{SO}_4$  | 124, 143, 149, 153, 163, 165 |
| $\text{Rb}_2\text{SO}_4$ | 125, 143, 153                |
| $\text{Cs}_2\text{SO}_4$ | 126, 141, 152                |
| $\text{ZnSO}_4$          | 163, 165                     |

Miscellaneous

|                                   |                              |
|-----------------------------------|------------------------------|
| $\text{Na}_3\text{SbO}_4$         | 165                          |
| $\text{Na}_3\text{AsO}_4$         | 165                          |
| $\text{Na}_2\text{MoO}_4$         | 128, 144, 150, 153           |
| $\text{Na}_2\text{WO}_4$          | 129, 144, 150, 153           |
| $\text{NaSCN}$                    | 130, 150, 156                |
| $\text{K}_2\text{MoO}_4$          | 131, 143, 153                |
| $\text{K}_2\text{WO}_4$           | 132, 143, 153                |
| $\text{K}_2\text{Cr}_2\text{O}_7$ | 133, 148, 153, 155           |
| $\text{KSCN}$                     | 134, 143, 149, 153, 155      |
| $\text{UO}_2\text{Cl}_2$          | 135, 151                     |
| $\text{NaNO}_2$                   | 136, 144, 150, 153, 156      |
| $\text{KNO}_2$                    | 137, 155                     |
| $\text{NaOH}$                     | 138, 144, 150, 153, 155, 165 |
| $\text{KOH}$                      | 139, 143, 148, 153, 155      |

## ALPHABETICAL INDEX OF COMPOUNDS

Aluminum Bromide, 163, 164, 165  
Aluminum Chloride, 163, 164, 165  
Aluminum Fluoride, 163, 164, 165  
Aluminum Iodide, 87, 141, 145, 152  
Aluminum Oxide, 163, 164  
Ammonium Bromide, 163, 164, 165  
Ammonium Chloride, 163, 164  
Ammonium Iodide, 164  
Antimony (III) Bromide, 163, 164  
Antimony (III) Chloride, 165  
Antimony (III) Oxide, 118, 145  
Arsenic (III) Bromide, 163, 164  
Barium Bromide, 65, 141, 145, 152  
Barium Chloride, 31, 141, 145, 152, 154, 163, 164, 165  
Barium Fluoride, 13, 141, 152, 163, 164  
Barium Iodide, 86, 141, 145, 152  
Barium Nitrate, 163  
Beryllium Chloride, 27, 145, 152  
Beryllium Fluoride, 165  
Bismuth (III) Bromide, 76, 141, 145, 152  
Bismuth (III) Chloride, 53, 141, 145, 152, 154  
Bismuth (III) Iodide, 100, 145  
Bismuth (III) Oxide, 119, 145  
Cadmium Bromide, 71, 141, 145, 152, 154, 163, 164, 165  
Cadmium Chloride, 44, 141, 145, 152, 154, 163, 164, 165  
Cadmium Iodide, 94, 141, 145, 152  
Calcium Bromide, 63, 141, 145, 152  
Calcium Chloride, 29, 141, 145, 152, 154, 163, 164, 165  
Calcium Fluoride, 11, 141, 152, 163, 164  
Calcium Iodide, 84, 141, 145, 152  
Calcium Nitrate, 163  
Cerium (III) Chloride, 35, 141, 145, 152  
Cerium (III) Fluoride, 15, 141, 152  
Cerium (III) Iodide, 89, 145  
Cesium Bromide, 61, 141, 146, 152, 165  
Cesium Chloride, 26, 141, 146, 152, 154  
Cesium Fluoride, 9, 141, 146, 152  
Cesium Iodide, 82, 141, 146, 152  
Cesium Nitrate, 110, 141, 146, 152  
Cesium Sulphate, 126, 141, 152  
Chromium (VI) Oxide, 115, 146  
Copper (I) Bromide, 68, 146  
Copper (I) Chloride, 41, 142, 146, 152, 154, 163  
Copper (II) Fluoride, 17, 146  
Gallium (III) Iodide, 96, 142, 146, 152

Indium (III) Bromide, 73, 142, 146, 152  
Indium (I) Chloride, 47, 142, 146, 152  
Indium (II) Chloride, 48, 142, 146, 152  
Indium (III) Chloride, 49, 142, 146, 152  
Indium (III) Iodide, 97, 142, 146, 152  
Lanthanum (III) Bromide, 66, 142, 146, 152  
Lanthanum (III) Chloride, 34, 142, 146, 152  
Lanthanum (III) Fluoride, 14, 142, 152  
Lanthanum (III) Iodide, 88, 147  
Lead (II) Bromide, 75, 142, 147, 152, 154, 163, 164, 165  
Lead (II) Chloride, 52, 142, 147, 152, 154, 163, 164, 165  
Lead (II) Fluoride, 20, 147  
Lead (II) Iodide, 99, 147  
Lead (II) Nitrate, 163  
Lead (II) Oxide, 117, 147  
Lithium Bromide, 57, 142, 147, 152, 153  
Lithium Carbonate, 102, 142, 147, 152, 154, 163, 164  
Lithium Chloride, 22, 142, 147, 152, 154, 163, 164, 165  
Lithium Fluoride, 6, 142, 147, 152, 165  
Lithium Iodide, 78, 142, 147, 152, 154  
Lithium Itrate, 106, 142, 147, 152, 154, 165  
Lithium Sulphate, 122, 142, 152  
Magnesium Bromide, 62, 142, 147, 152  
Magnesium Chloride, 28, 142, 147, 152, 163, 164, 164  
Magnesium Fluoride, 10, 142, 152  
Magnesium Iodide, 83, 142, 147, 152  
Manganese (II) Chloride, 40, 147  
Manganese (II) Fluoride, 16, 147  
Mercury (II) Bromide, 72, 142, 148, 152, 154, 163, 164, 165  
Mercury (I) Chloride, 45, 143, 148, 152  
Mercury (II) Chloride, 46, 143, 148, 152, 164  
Mercury (II) Iodide, 95, 143, 148, 152, 154, 164, 165  
Molybdenum (VI) Oxide, 116, 148  
Neodymium (III) Bromide, 67, 143, 148, 153  
Neodymium (III) Chloride, 37, 148  
Neodymium (III) Iodide, 91, 148  
Niobium (V) Chloride, 164  
Potassium Bromide, 59, 143, 148, 153, 154, 163, 164, 165  
Potassium Carbonate, 104, 143, 148, 153, 155, 163, 164  
Potassium Chloride, 24, 143, 148, 153, 155, 163, 164, 165  
Potassium Dichromate, 135, 148, 153, 155  
Potassium Fluoride, 8, 143, 148, 153, 164, 165  
Potassium Hydroxide, 139, 143, 148, 153, 155  
Potassium Iodide, 80, 143, 148, 153, 155  
Potassium Molybdate, 131 143, 153  
Potassium Nitrata, 108, 143, 147, 153, 155, 163, 164, 165  
Potassium Nitrite, 137, 155  
Potassium Sulphate, 124, 143, 149, 153, 163, 165  
Potassium Thiocyanate, 134, 143, 149, 153, 155  
Potassium Tungstate, 132, 143, 153  
Praseodymium (III) Chloride, 36, 149  
Praseodymium (III) Iodide, 90, 149

Rubidium Bromide, 60, 143, 149, 153, 155  
Rubidium Chloride, 25, 143, 149, 153, 155  
~~Rubidium Iodide~~, 81, 143, 149, 153  
Rubidium Nitrate, 109, 143, 149, 153, 165  
Rubidium Sulphate, 125, 143, 153  
Scandium (III) Chloride, 32, 143, 149, 153  
Silver Bromide, 69, 143, 149, 153, 155, 163, 164, 165  
Silver Chloride, 42, 144, 149, 153, 155, 163, 164, 165  
Silver Fluoride, 18, 149  
Silver Iodide, 92, 144, 149, 153, 155, 163, 164, 165  
Silver Nitrate, 111, 144, 149, 153, 155, 163, 164, 165  
Sodium Aluminum Fluoride, 163, 164  
Sodium Antimonate, 165  
Sodium Arsenate, 165  
Sodium Bromide, 58, 144, 149, 153, 155, 163, 164, 165  
Sodium Carbonate, 103, 144, 149, 153, 155, 163, 164  
Sodium Chloride, 23, 144, 150, 153, 155, 163, 164, 165  
Sodium Fluoride, 7, 144, 150, 153, 163, 164, 165  
Sodium Hydroxide, 138, 144, 150, 153, 155, 165  
Sodium Iodide, 79, 144, 150, 153, 156  
Sodium Molybdate, 128, 144, 150, 153  
Sodium Nitrate, 107, 144, 150, 153, 156, 163, 164, 165  
Sodium Nitrite, 136, 144, 150, 153, 156  
Sodium Sulphate, 123, 144, 150, 153  
Sodium Thiocyanate, 130, 150, 156  
Sodium Tungstate, 129, 144, 150, 153  
Strontium Bromide, 64, 144, 150, 153  
Strontium Chloride, 30, 144, 150, 153, 156  
Strontium Fluoride, 12, 144, 153, 164  
Strontium Iodide, 85, 144, 150, 153  
Strontium Nitrate, 163  
Tellurium (II) Chloride, 54, 150  
Tellurium (IV) Chloride, 55, 150  
Tellurium (IV) Oxide, 120, 150  
Thallium (I) Bromide, 74, 151, 165  
Thallium (I) Chloride, 50, 144, 151, 153, 163, 164  
Thallium (I) Iodide, 98, 151  
Thallium (I) Nitrate, 112, 144, 151, 153, 156, 163, 164, 165  
Thorium (IV) Chloride, 38, 151  
Tin (II) Chloride, 51, 144, 151, 153  
Uranium (IV) Chloride, 39, 151  
Uranyl (II) Chloride, 135, 151  
Vanadium (V) Oxide, 114, 151  
Yttrium (III) Chloride, 33, 144, 151, 153  
Zinc Bromide, 70, 144, 151, 153, 163, 164, 165  
Zinc Chloride, 43, 144, 151, 153  
Zinc Fluoride, 19, 151  
Zinc Iodide, 93, 144, 151, 153  
Zinc Sulphate, 163, 165  
Zirconium (IV) Fluoride, 165  
Zirconium (IV) Chloride, 164

TECHNICAL REPORT DISTRIBUTION LIST

Commander  
U.S. Force Office of Scientific Research (ARDC)  
TN: SROA  
Washington 25, D. C.

Commanding Officer  
Office of Naval Research Branch Office  
The John Crerar Library Building  
86 East Randolph Street  
(2) Chicago 1, Illinois (1)

Commander  
U.S. Force Office of Scientific Research (ARDC)  
TN: SREC  
Washington 25, D. C.

National Science Foundation  
ATTN: Chemistry Division  
1520 M Street, N.W.  
Washington 25, D. C. (1)

Commander  
U.S. Air Development Center  
TN: Chemistry Research  
Branch - WCRRC  
 Wright-Patterson Air Force Base, Ohio

Commanding Officer  
Office of Naval Research Branch Office  
1030 East Green Street  
Pasadena 1, California (1)

Commander  
U.S. Air Development Center  
TN: Chemistry Research  
Branch - WCRRC  
Wright-Patterson Air Force Base, Ohio

Commanding Officer  
Office of Naval Research Branch Office  
Box 39, Navy 100 Fleet Post Office  
New York, New York (3)

Director of Research  
(1) U.S. Army Signal Research and Development Laboratory  
Fort Monmouth, New Jersey (1)

Commanding Officer  
Army Research Office  
Box CM, Duke Station  
Durham, North Carolina  
(1) ATTN: CRD-AA-IP (1)

Commander  
U.S. Force Office of Scientific Research (ARDC)  
Post Office Box 2035  
Pasadena 2, California

Atomic Energy Commission  
Division of Research  
Chemistry Programs  
Washington 25, D. C. (1)

Commander  
U.S. Air Development Center  
TN: Materials Laboratory-WCRT  
Wright-Patterson Air Force Base, Ohio

Atomic Energy Commission  
Division of Technical Information Ext.  
Post Office Box 62  
Oak Ridge, Tennessee (1)

Commander  
European Office, ARDC  
U.S. Air Attaché, Brussels, Belgium  
Department of State, Washington, 25 D. C.  
Postage sufficient for Washington, D.C., Noted: Un-  
classified (1)

Commanding Officer  
U.S. Army Chemical Research and Development Laboratories  
ATTN: Librarian  
Edgewood Arsenal, Maryland (1)

Professor Norman Hackerman  
Department of Chemistry  
University of Texas  
Austin, Texas (1)

Commander  
U.S. Force Office of Naval Research  
Department of the Navy  
Washington 25, D. C.  
TN: Code 425

Professor Dr. M. Rolla  
Istituto Di Chimica Fisica  
Della Universita  
Viale Taramelli 2  
Pavia, ITALY  
via Commanding Officer  
Office of Naval Research Branch  
Office  
Box 39, Navy 100, F.P.O.  
New York, New York (1)

Professor Oskar Glemser  
Universitat zu Gottingen  
Wilhelmsplatz 1  
Gottingen, GERMANY  
via Commanding Officer  
Office of Naval Research Branch  
Office  
Box 39, Navy 100, F.P.O.  
New York, New York

Dr. Tormod Forland  
Institute of Silicate Research  
Norges Tekniske Høgskole  
Trondheim, NORWAY  
via Commanding Officer  
Office of Naval Research Branch  
Office  
Box 39, Navy 100, F.P.O.  
New York, New York (1)

Professor R. Pientelli  
Laboratorio Di Elettrochimica  
Politecnico Di Milano  
Piazzo Leonardo Da Vinci 32  
Milan, ITALY  
via Commanding Officer  
Office of Naval Research Branch  
Office  
Box 39, Navy 100, F.P.O.  
New York, New York

Dr. J. Zarzycki  
Compagnie De Saint Gobain  
Centre De Recherches  
52 Boulevard De La Villette  
Paris XIX, FRANCE

Office of Naval Research Branch  
Office  
Box 39, Naval 100, F.P.O.  
New York, New York (1)

Professor G. Schwarzenbach  
Erdenassische Technische Hochschule  
Department of Chemistry  
Zurich, Switzerland  
via Commanding Officer  
Office of Naval Research Branch  
Office  
Box 39, Navy 100, F.P.O.  
New York, New York

Professor J. Besson  
Ecole Nationale Supérieure  
D'Electrochimie et D'Electro-  
metallurgie  
39-41 Blvd. Gambetta  
Grenoble, Isere, FRANCE  
via Commanding Officer  
Office of Naval Research Branch  
Office  
Box 39, Naval 100, F.P.O.  
New York. New York (1)

Dr. G. Chauvin  
C.E.N. De Saclay  
B.P. No. 2  
Gif-sur-Yvette, S and O.,  
FRANCE  
via Commanding Officer  
Office of Naval Research Branch  
Office  
Box 39, Navy 100, F.P.O.  
New York, New York

Professor J. A. Ketelaar  
Lab. voor Elektrochemie der  
Universiteit Amsterdam  
Hooge Kadijk 198  
Amsterdam C, NETHERLAND

Dr. J. H. Lumsden  
Imperial Smelting Corp. Ltd.  
Avonmouth, Bristol  
via Commanding Officer  
Office of Naval Research Branch (1)  
Office  
Box 39, Navy 100, F.P.O.  
New York, New York

Dr. D.J.G. Ives  
 University of London  
 Birkbeck College  
 Department of Chemistry  
 Malet St. London W.C. 1,

Technical Report

U.S. - AFOSR No. 64-0039

MOLTEN SALT DATA

Electrical Conductance, Density and Viscosity

by

George J. Janz, Anthony T. Ward and Roger D. Reeves  
Rensselaer Polytechnic Institute  
Department of Chemistry  
Troy, New York

ERRATUM

The coefficients of the density ( $\rho$ ) and equivalent conductance ( $\Lambda$ )  
equations given in Table 46, [LEAD (II) CHLORIDE], and Table 68, [LEAD (II)  
BROMIDE], are in error. The corrected forms of these equations, together  
with the appropriate values of  $\rho$  and  $\Lambda$  at 10°K. intervals, are attached  
herewith.

ARCHIVE COPY

TABLE 46 (Corrected Dec. 8, 1964)

LEAD (II) CHLORIDE

Eq. Wt. 159.00

m.p. 501 °C. (774 °K.)

$$\kappa = 18.093 \exp. (-3883/RT)$$

$$\rho = 6.112 - 1.50 \cdot 10^{-3} T$$

$$\Lambda = 668.4 \exp. (-4355/RT)$$

$$\eta = 72.9309 - 0.17501T + 1.39742 \cdot 10^{-4} T^2 - 3.59013 \cdot 10^{-8} T^3$$

| T   | $\Lambda$ | $\kappa$          | $\rho$ | $\eta$ |
|-----|-----------|-------------------|--------|--------|
| 780 | 41.5      | 1.47 <sub>5</sub> | 4.942  | 4.40   |
| 790 | 43.0      | 1.52 <sub>5</sub> | 4.927  | 4.18   |
| 800 | 44.4      | 1.57              | 4.912  | 3.98   |
| 810 | 46.0      | 1.62              | 4.897  | 3.78   |
| 820 | 47.6      | 1.67              | 4.882  | 3.59   |
| 830 | 49.0      | 1.71 <sub>5</sub> | 4.867  | 3.41   |
| 840 | 50.6      | 1.76 <sub>5</sub> | 4.852  | 3.24   |
| 850 | 52.2      | 1.81 <sub>5</sub> | 4.837  | 3.09   |
| 860 | 53.8      | 1.86 <sub>5</sub> | 4.822  | 2.94   |
